A prompt label and an energy-deposition cut constrain different physics
Analytic model; no MC or reconstructed events
Single-hit prompt acceptance
Hypothetical extra constant-speed path [cm]
150 ps jitter; +/-0.3 ns label
T=0.1 GeV
T=0.3 GeV
T=1 GeV
T=3 GeV
Kinematically allowed maximum recoil [GeV]
Incident neutron kinetic energy [GeV]
Free elastic n-p, equal masses: max recoil = T
3 MeV deposited-energy selection
Historical 300 MeV label condition
