conditional probability
true-neutron rank k (ordered in E_{kin})
$U_{\mathrm{sym}} = 0$ MeV
$U_{\mathrm{sym}} = 18$ MeV
$U_{\mathrm{sym}} = 90$ MeV
solid: kth neutron selected
dashed: at least k true clusters selected
points require $N_{\mathrm{event}} \geq 20$
event-level efficiency
true reconstructable multiplicity N_n^{true}
solid: mean selected fraction
dashed: all true clusters selected
