Raw energy response on two fixed candidate populations
Identity
Native baseline B0
No energy clause
Common positives
Reconstructed / MC target
N = 326,651
Mean raw reconstructed energy [GeV]
MC max initial Ekin of qualifying tracks [GeV]
Added soft positives
Reconstructed / MC target
N = 5,564
Mean raw reconstructed energy [GeV]
MC max initial Ekin of qualifying tracks [GeV]
Points use the actual mean target in each display bin; bars are SD over 3 seeds, not event/file uncertainty.
All validation groups and all target bins retained. Baseline energy head was not trained on added-soft positives.
