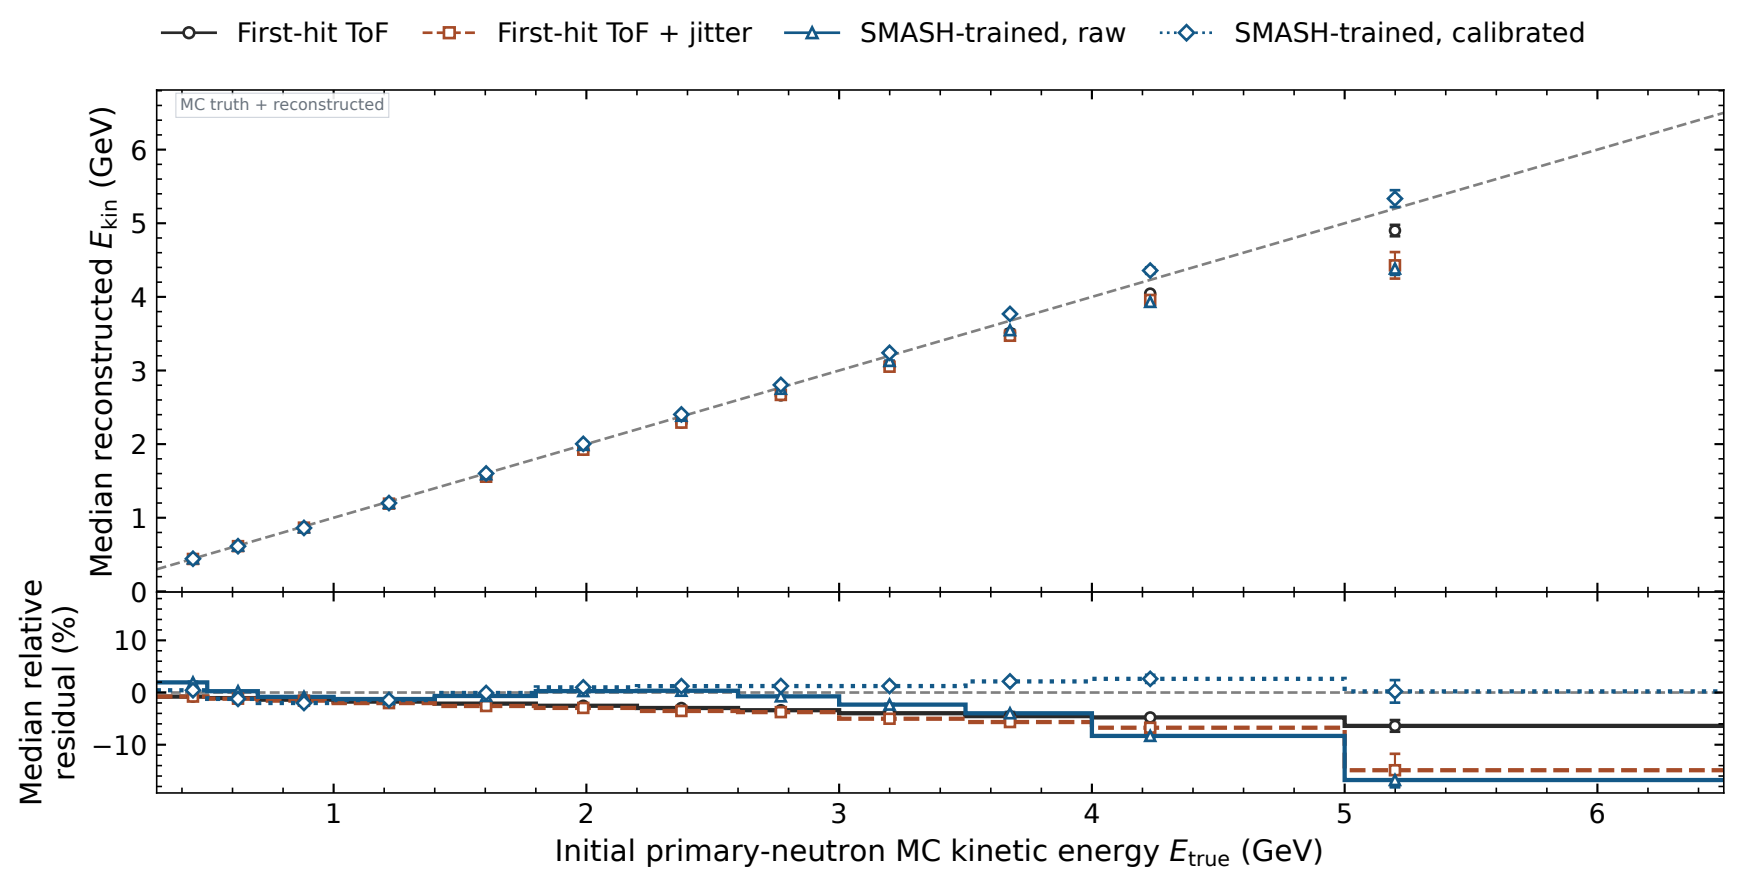
Neutron energy linearity

BM@N HGND simulation · SMASH Xe+Cs, 2.87 GeV/nucleon · 286 files · no impact-parameter selection
Nominal HGND window · isolated neutron links · both score cuts · physical speed for both first-hit times



Equal weight per training repeat · bars show SD from 400 paired whole-file resamples
MC matching includes ToF · nominal straight path, no separate event start · jitter SD 0.15 ns
