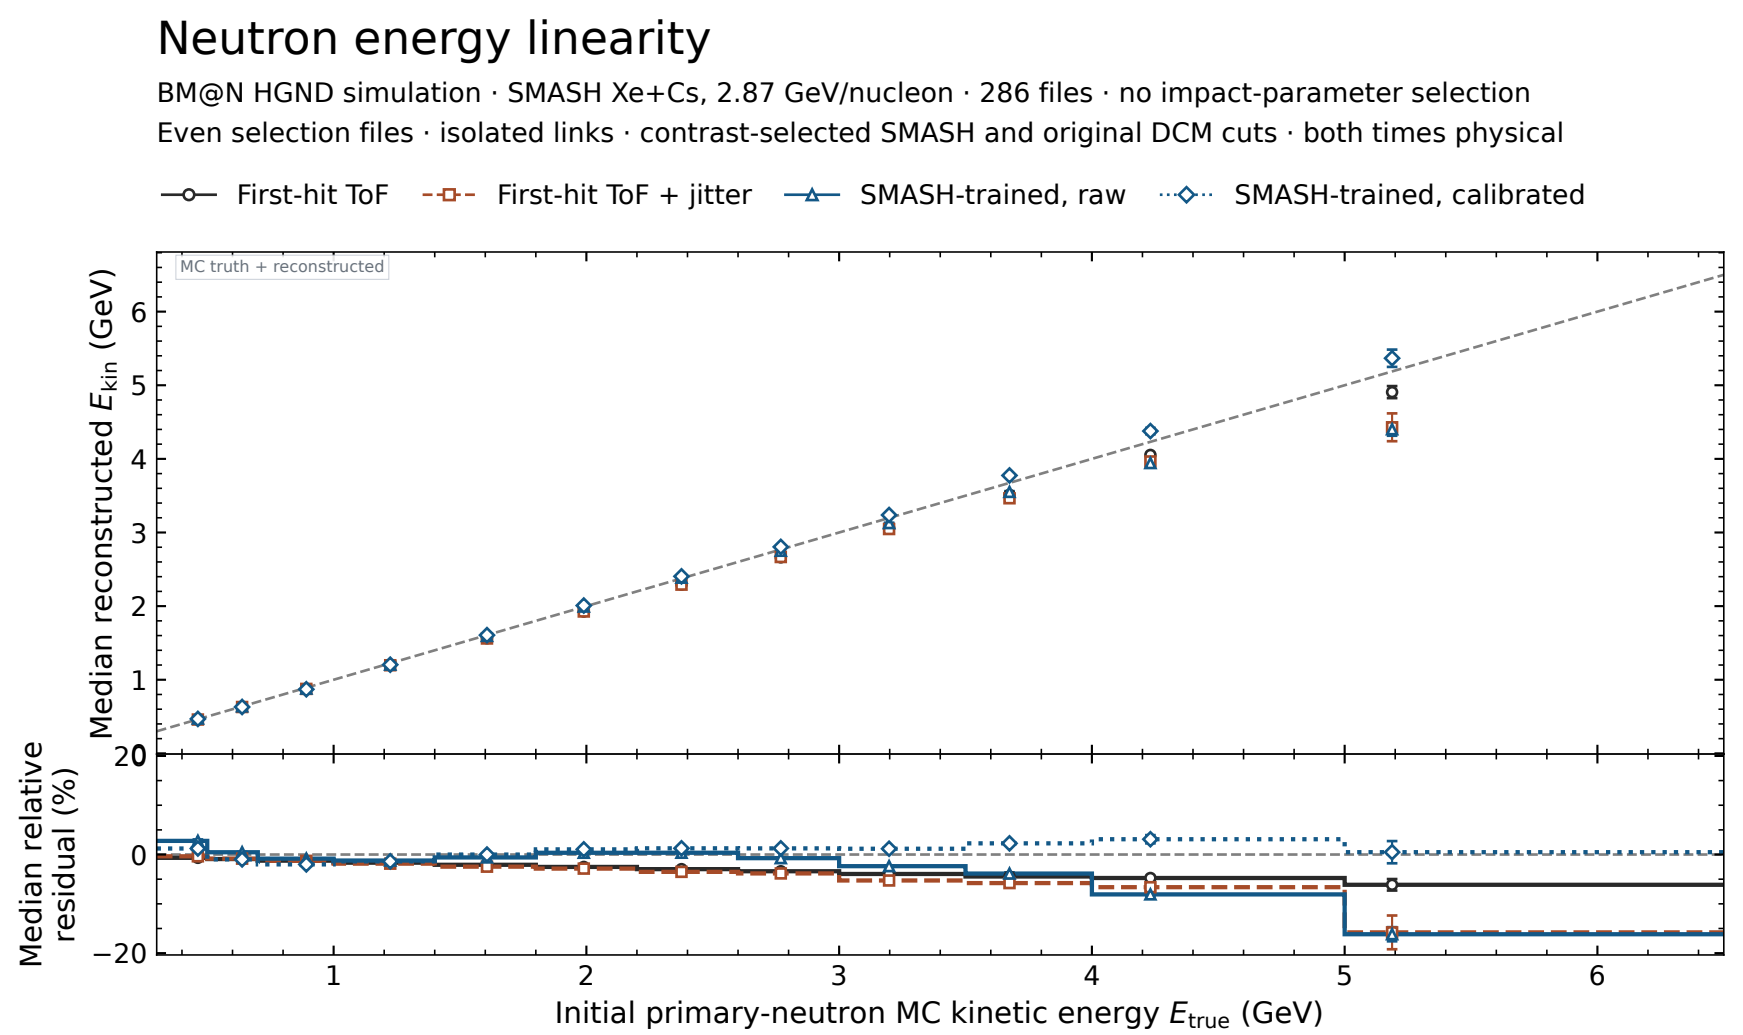
Neutron energy linearity

BM@N HGND simulation · SMASH Xe+Cs, 2.87 GeV/nucleon · 286 files · no impact-parameter selection
Even selection files · isolated links · contrast-selected SMASH and original DCM cuts · both times physical



Equal weight per training repeat · bars show SD from 400 paired whole-file resamples
MC matching includes ToF · nominal straight path, no separate event start · jitter SD 0.15 ns
